

Watson Clinic experts are the *Clear Choice* for Treating Cataracts

Cataracts cause a clouding of our vision that often obscures our ability to see clearly when performing everyday activities, such as reading street signs, driving at night, playing golf or reading small print. Though they are common as we age, cataracts may also result from factors such as diabetes, smoking or certain medications.

Cataract surgery is the most common surgical procedure performed in the United States and boasts a remarkable 95% rate of effectiveness.

Watson Clinic is proud to offer minimally invasive cataract treatment that involves flexible foldable lens replacements that allow for smaller incisions, often without the need for stitches. This procedure doesn't require general anesthesia and patients go home the same day. Some patients even experience a decreased need for glasses following the surgery.

Watson Clinic ophthalmologists Dr. Musa Awan and Dr. Adam Gant are pleased to perform these breakthrough advanced cataract treatments as convenient outpatient procedures.
