

Pranay C. Patel, M.D.
Facial Plastic and
Reconstructive Surgery

Pranay Patel, MD

Dr. Pranay Patel is a board-certified otolaryngologist/facial plastic surgeon who offers a comprehensive selection of facial plastic and reconstructive services, including facelifts, brow lifts, eyelid surgeries, skin resurfacing, laser hair and vein removal, botox, facial fillers for wrinkle reduction, skin cancer reconstructive surgery, scar revisions and much more. He has performed expert facial cosmetic and plastic reconstructive services for much of the past decade from his offices at Watson Clinic's main campus.

Dr. Patel received his undergraduate degree from University of Texas in Austin before earning his medical degree at the Baylor College of Medicine in Houston. He performed his internship in general surgery at Oregon Health Sciences University in Portland, followed by a research fellowship in surgical endocrinology at Louisiana State University in New Orleans and a residency in otolaryngology – head and neck/facial plastic surgery at Geisinger Medical Center in Danville, Pennsylvania. *He is board-certified and is a Fellow of the American Academy of Facial Plastic and Reconstructive Surgeons, the American Academy of Otolaryngology/Head & Neck Surgery, as well as the American College of Surgeons.*

Dr. Patel has won numerous awards for his research work, contributed to a series of prestigious medical publications, conducted countless presentations related to the field of otolaryngology and facial plastic surgery, and mentors medical students from the University of South Florida. He has served on the Executive Board at Watson Clinic, as well as Vice President and President of the medical staff at Lakeland Regional Medical Center.

Pranay C. Patel, M.D.

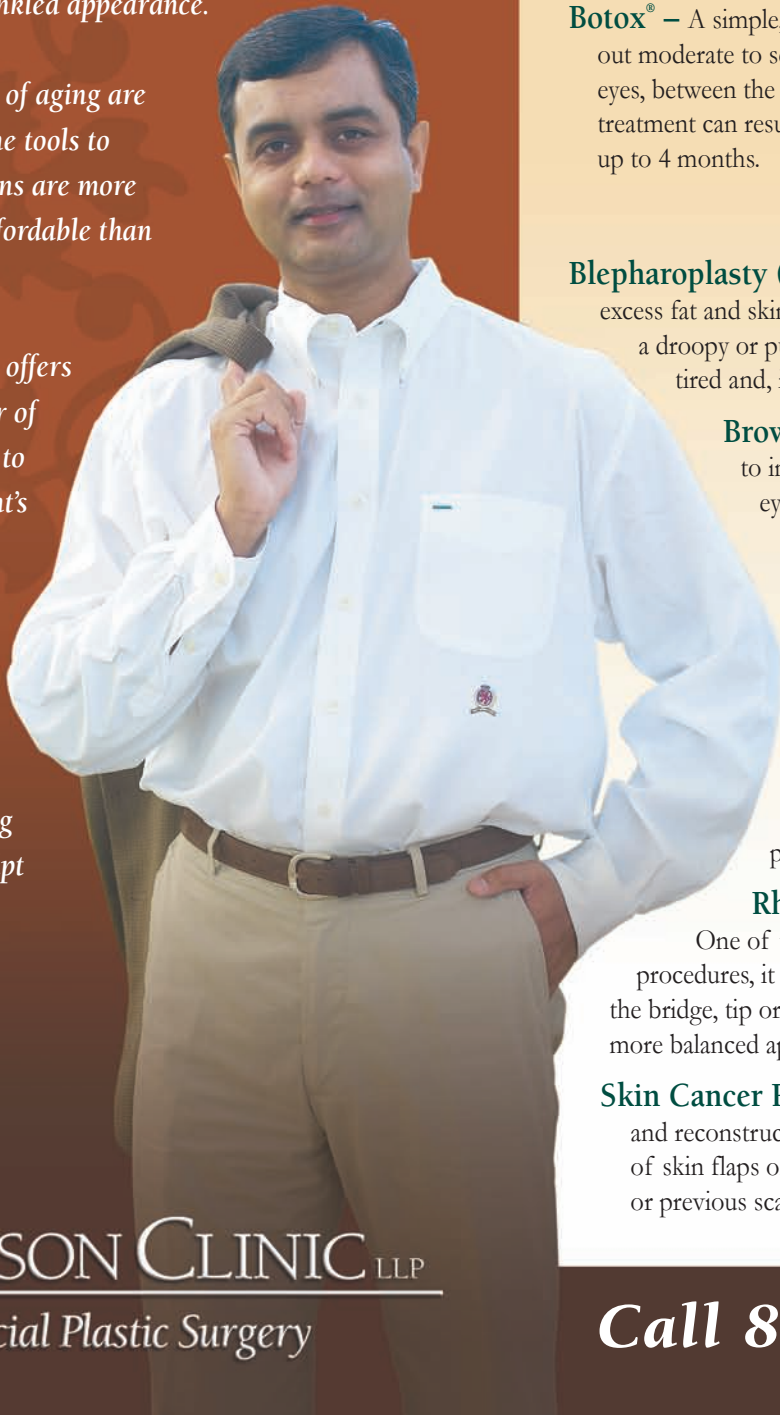

An Expert in Facial Plastics

As we age, the bone structure and soft tissue in our faces begin to change, often creating an increasingly undesirable, wrinkled appearance.

The visible signs of aging are inevitable, but the tools to reverse those signs are more advanced and affordable than ever before.

Dr. Pranay Patel offers a complete roster of services tailored to satisfy the patient's every need.

From cosmetics treatments to in-depth surgical efforts, he possesses the tools and training necessary to sculpt the look of your dreams.

WATSON CLINIC LLP

Facial Plastic Surgery

Facial Fillers/Botox

Radiesse® – This easy, safe and convenient cosmetic dermal filler corrects facial lines and wrinkles and restores a natural and youthful look.

Restylane®/Juvederm® – These injectable gels are referred to as facial fillers and can restore skin volume, enhance softness and revitalize appearance. They are also used for lip augmentation and enhancement.

Botox® – A simple, non-surgical treatment that smoothes out moderate to severe expression or frown lines around the eyes, between the eyebrows or forehead area. One 10-minute treatment can result in a remarkable improvement that can last up to 4 months.

Surgical

Blepharoplasty (Eyelid Surgery) – The removal of excess fat and skin from the upper and lower eyelids to correct a droopy or puffy appearance that often makes one look tired and, in some cases, obscures peripheral vision.

Brow Lift – Tightening or removal of skin to improve forehead wrinkles or drooping eyebrows.

Rhytidectomy (Full Facelift or Mini-Facelift) – The removal of excess skin with tightening of underlying tissues from the lower face and neck region, thus helping to reverse the effects of aging.

Otoplasty (Ear Repositioning) – Surgery performed to “pin back” protruding ears by reshaping the cartilage.

Rhinoplasty (Nasal Reshaping) – One of the most common of all facial plastic procedures, it involves reshaping the nose, whether it be the bridge, tip or nostrils. This procedure can result in a more balanced appearance and can also improve breathing.

Skin Cancer Reconstructive Surgery – Excision and reconstruction of facial skin cancers with the use of skin flaps or skin grafts to help conceal cancer defects or previous scars.

In-Office Cosmetic Procedures

Laser Hair/Vein Removal – Long-term hair reduction and spider vein treatment is achieved through the latest in laser energy technology.

Dermabrasion – This procedure buffs away the top layers of skin, resulting in a healthier and fresher look, improving wrinkles, scars, blemishes or sunspots.

Chemical Peels – The damaged outer layers of your skin are gently removed using a chemical solution, resulting in a vastly improved appearance and texture. This treatment is especially helpful for individuals with facial blemishes, wrinkles and uneven pigmentation.

Laser Skin Resurfacing – Use of state-of-the-art lasers (Fraxel®, Cutera®) to improve skin tone and texture, and to reduce facial wrinkles, scarring, acne pock marks, blemishes or skin pigment changes.

Watson Clinic's new Medical Spa, located adjacent to Dr. Patel's office in the Bella Vista Building, offers the finest in soothing and refreshing cosmetic services for the face and body. All treatments are provided by licensed and experienced medical professionals.
