

Feel more like your younger, vital, sensual self.

Menopause and other events such as childbirth, hysterectomy, and chemotherapy can lead to reduced estrogen production from the ovaries and may lead to thinning, drying, loss of elasticity and inflammation of the vaginal and vulvar tissues. Diminished vaginal health and function can result in decreased self-esteem, sexual desire, painful intercourse and urinary dysfunction.

diVa® is the latest evolution of laser resurfacing offering two lasers that work simultaneously to resurface the vaginal skin as well as stimulate re-growth of the deeper vaginal tissues. The collagen, blood vessels, and nerves in this deeper layer are responsible for elasticity, lubrication, and sensitivity. **diVa's** automated guidance system improves patient comfort and consistency across treatments. These unique features

result in more uniform and predictable improvement in vaginal health and function.

The following therapies provide a total women's health solution for both internal and external vaginal tissues.

diVa® **Laser Vaginal Therapy** resurfaces and improves the health and function of vaginal connective tissues. This enables women to feel more confident, youthful, vital, and empowers an improved sex life.

Vaginal resurfacing treatments are customized based on the patient's age, symptoms and desired results. Treatments produce minimal to no discomfort and take just 3-5 minutes to complete in an in-office setting. Post-treatment downtime is minimal.

diVa® **Tyte** is a non-ablative treatment using Broadband Light (BBL) that heats the external dermal tissues and facilitates the remodeling of connective tissue. There is no downtime and no need for topical anesthetic. This results in tightening of sagging, non-firm vulvar skin, which improves appearance, functionality and self-esteem.

diVa® was named a 2019 "Most Worth It" procedure by **RealSelf**, the leading online resource to learn about cosmetic treatments, based entirely on ratings and reviews from consumers.

FREQUENTLY ASKED QUESTIONS

Who is an ideal candidate for diVa?

Women who are experiencing challenges with their changing bodies and have concerns for their vaginal health.

How long does a procedure take?

A fast 3-5 minutes is the typical treatment time.

How many treatments are recommended?

We typically recommend a series of 3 treatments each administered 4-6 weeks apart, followed by an annual single maintenance treatment.

What do you experience during the treatment?

diVa® laser therapy is fast with minimal discomfort. A topical anesthetic may be applied for added comfort. You may experience slight pressure against the vaginal wall during the treatment, and some women experience increased sensitivity near the vaginal opening.

What do you experience after the treatment?

You may return to your daily routine with minimal to no discharge, spotting, or discomfort; however, you should avoid sexual intercourse or vaginal insertion for up to 48 hours. In some progressive treatments, we may suggest a longer time frame.

Is anesthesia necessary?

No, diVa is an in-office treatment. Topical anesthetic may be applied to increase your comfort, but is not necessary.

diVa® is a breakthrough laser procedure designed to address a woman's most intimate challenges.

This quick, comfortable, no-downtime solution can be customized to meet your gynecological health needs and desired results.

Your Vaginal Health

Just like every other part of the body, the vagina changes with age, but additional decline in vaginal health may be caused by other major events in a women's life:

- **Vaginal Childbirth** – stretching of the vaginal canal and surrounding tissues can lead to laxity
- **Menopause** and other events such as a **hysterectomy**, **chemotherapy** and **breastfeeding** may decrease estrogen production

diVa® can help with...

- **Leakage:** Loss of urine caused by physical activity, coughing or sneezing
- **Lubrication:** Lack of vaginal lubrication in response to sexual stimulation or chronic vaginal dryness
- **Laxity:** Loosening or loss of elasticity of the skin and tissue in the vaginal area

diVa® does more than you might think. This effective, nonsurgical laser treatment can also address a diverse array of additional feminine concerns, including:

- **Hair removal** from axillary, bikini, and lower abdominal areas
- **Softening and lightening** of scars from episiotomy, c-section, and hysterectomy
- **Improvement** of Lichen Sclerosis symptoms
