Did you know that up to 15% of babies born each year have abnormally shaped ears?

This condition can severely impact a child's self-esteem during their most formative years. A minimally invasive procedure called **Otoplasty** can restore peace of mind, form and function to children born with misshapen ears. Board-certified **Watson Clinic Facial Plastic Surgeon & Otolaryngologist (ENT) Dr. Raam Lakhani** specializes in otoplasty for pediatric patients ages 5 and up.

Typically involving a small incision hidden from view, an otoplasty procedure can:

- Change the shape and reduce the size of the ear.
- Pin back ears that protrude.
- Bring symmetry to both ears.
- Correct any additional deformities.

Otoplasty can correct most ear deformities using a small incision. Recovery time is minimal, and your child will feel more confident and secure in their appearance.
