

SERGE JEAN, M.D., Ph.D.

Serge Jean, M.D., Ph.D. has provided Watson Clinic patients with the very best care since 1999. He is board-certified and specializes in otolaryngology, which includes expertise in reconstructive surgery of the head and neck region, as well as facial plastic surgery. Dr. Jean performs the most involved and complex reconstructive procedures, working to restore functionality and appearance for patients who suffer physical abnormalities of their face.

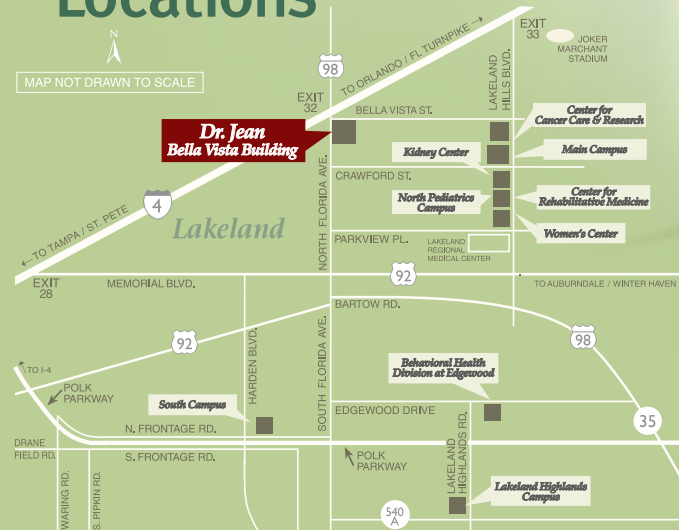

His skillful cosmetic surgeries have been known to shave years from a person's appearance, from mid-face lifts to procedures that enhance the definition of the nose, chin or cheeks. In addition, Dr. Jean and his expert staff offer a variety of non-surgical treatment options that leave patients feeling fresh and revitalized, and help them reclaim a youthful exuberance to their appearance.

As for the latest in laser technology, Dr. Jean uses Fraxel® and Cutera® laser treatments to reduce or eliminate fine lines and wrinkles, minimize scarring, and repair sun damaged areas to produce soft, baby-like skin. The patient enjoys stunning results following these quick and painless treatments.

The scope and versatility of Dr. Jean's services apply to the treatment of chronic snoring and mild to moderate sleep apnea as well. The Pillar® procedure is a simple, minimally invasive procedure that significantly alleviates snoring intensity through the implantation of tiny polyester inserts into the soft palate. Performed in less than 30 minutes, the procedure enhances quality of sleep for both patients and their spouses.
