WATSON CLINIC

A **TEAM** WITH *Vision*

The key to maintaining healthy vision for patients of all ages is the ***annual eye exam***.

Why are these exams important? Because they can detect potential vision problems early when they are most treatable.

Many times, you might not even be aware that the beginnings of a vision problem exist until you undergo a proper evaluation.

This includes eye conditions related to diabetes, high blood pressure, and many other common health concerns.

Watson Clinic's Optometry and Ophthalmology specialists are experts in providing these eye exams, and in diagnosing and treating a variety of eye disorders.

OPTOMETRY

Watson Clinic's skilled Optometry department provides comprehensive eye exams, vision tests, and much more for patients five years and older.

Services include:

- **Routine eye exams**
- **Family eye exams**
- **Contact lens fittings**
- **Diabetic eye exams**
- **Prescribing eyeglasses or contact lenses**
- **Evaluation of Acute Eye Problems**
- **Evaluation and treatment of Glaucoma and Dry Eye Syndrome**
- **Evaluation and monitoring of Cataracts and Macular Degeneration**

The department works to diagnose a host of diseases and common concerns related to the eye, and makes referrals to the Ophthalmology department when further specialized care or surgical efforts might be needed.

OPHTHALMOLOGY

Our Ophthalmologists focus on the anatomy, functions and diseases of the eye. They treat a variety of eye disorders that may require surgery. Cataracts are one of the most common of these disorders.

In addition to minimally invasive cataract surgery, our Ophthalmologists are pleased to offer glaucoma treatments, diabetic eye care, corneal transplants, LASIK and refractive eye surgery, artificial eye fitting and care, and a comprehensive series of eye exams for adults and children.
