

Your Vaginal Health

Just like every other part of the body, the vagina changes with age, but additional decline in vaginal health may be caused by two major events in a women's life:

- **Vaginal Childbirth** - stretching of the vaginal canal and surrounding tissues
- **Menopause** and other events such as a hysterectomy, chemotherapy and breastfeeding

Other Conditions that diVa® will help

- **Mild Urinary Incontinence:** Involuntary loss of urine caused by physical activity, coughing and sneezing
- **Vaginal Lubrication:** Lack of vaginal lubrication in response to sexual stimulation or chronic vaginal dryness
- **Vaginal laxity:** Loosening or loss of elasticity of the skin and tissue in the vaginal area

Feel more like your younger, vital, sensual self.

diVa® is a breakthrough laser procedure designed to address a woman's most intimate challenges. This quick, comfortable, no-downtime solution can be customized to meet your gynecological health needs and desired results.

diVa
LASER VAGINAL THERAPY

FREQUENTLY ASKED QUESTIONS

Who is an ideal candidate for diVa®?

Women who are experiencing challenges of their changing bodies and have concerns for their vaginal health.

How long does a procedure take?

A fast 3-5 minutes is typical treatment time.

How many treatments are recommended?

We will recommend a series of 3 treatments every 4-6 weeks apart, followed by annual checkups for maintenance.

What do you experience during the treatment?

diVa® laser therapy is fast with minimal discomfort. A topical anesthetic may be applied for added comfort. You may experience slight pressure against the vaginal wall during the treatment, and some women experience increased sensitivity near the vaginal opening.

What do you experience in the next 48 hours after the treatment?

You may return to your daily routine with minimal to no discharge, spotting, or discomfort; however, you should avoid sexual intercourse or vaginal insertion for up to 48 hours. In some progressive treatments, we may suggest a longer time frame.
